FLANGEHOOD™

During turnarounds and factory shutdowns, a lot of inline equipment is removed so that the pipelines are exposed to dust, moisture and dirt from outside during repair/overhaul. A temporary sealing of the pipe parts is necessary to prevent dirt, rainwater and other undesirable attributes from entering the pipe.

FEATURES FLANGEHOOD™

- Weather and UV resistant
- Sealing with elastic band
- Flame retardant (therefore spark resistant)
- Apply Easyfix, so it saves time
- Suitable for ANSI, DIN and JIS Flanges

SAFE AND FAST SEALING OF OPEN FLANGES

The traditional solution is to seal the open flange or pipe with a plastic bag secured with tape or tyrap. Such a seal is vulnerable and inefficient. It hinders a smooth inspection and after inspection the temporary seal must be repaired.

Steekflens.nl offers a unique and simple solution to work quickly and safely and still be able to inspect the pipe with the FlangeHood™. It is re-usable which supports well the sustainability.
